

First, I have downloaded burpsuite and configured manual proxy. The level is medium

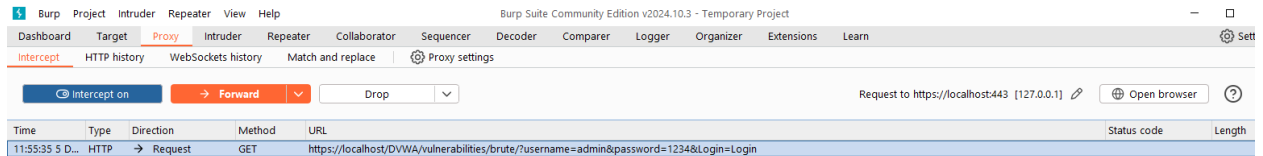

1. Put 'admin' as username and '1234' as password.

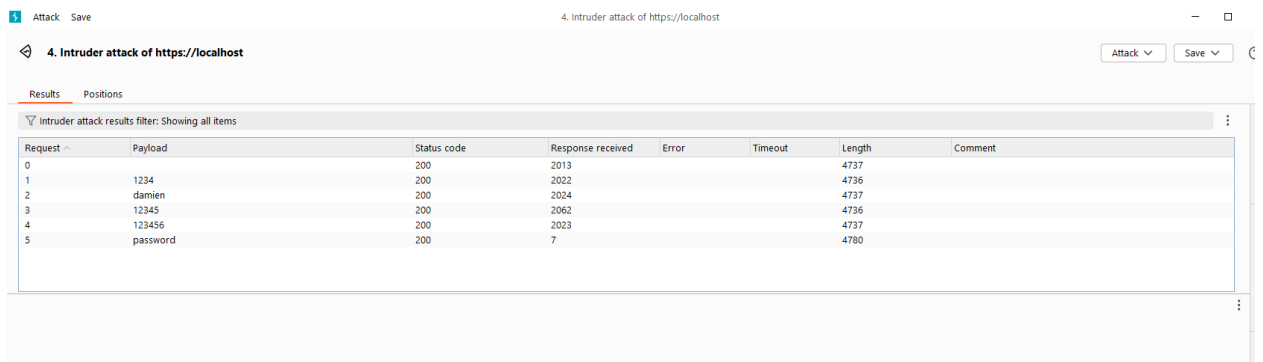

2. Go on Burpsuite and turn on interception mode

3. Click log in on DVWA and go back on burpsuite. You will see the following

4. After we select our password and **Add**, then we send it to intruder.

5. I created the password list and sent a **Sniper attack**. After that the application started to try all passwords. And we can see that the last password 'password' has the longest length. So, it is the correct password.

Vulnerability: Brute Force
